London S.W.1. (England).

Dear Sir,

NCR BROKE - REPULPING

I have your letter of May 15 regarding repulping the NCR Co. broke. Several different mills have used limited quantities of our CB Broke over the years, including Bergstrom Paper Company, Woonah, Illinois and United Paper Company, Makawasco, Michigan. At present we believe that the Kimberly-Clark Company, Meraine Mill in West Carrollton, Ohio is using the bulk of the CB Broke, and is repulping it into a good quality. All of our waste papers are sold through dealers, and, therefore, it is possible that someone else would be getting some of this that we can not be aware of.

We actually know very little about the processes used in repulping the CB Broke, however, we do not know that it is done by a conventional de-coating process. The Meraine Mill has a batch process and we believe they have developed some special handling means which enable them to easily remove the CB coating. Confidentially, we can tell you that we receive \$ 75.00 per ton for this waste, which is quite high in relation to other waste papers we sell. This compares favourably with other white waste papers we sell and, therefore, they must be removing the coating in a rather simple manner.

It was certainly nice to hear from you, Sam. If we can be of help on anything else, please let us know.

Yours very truly,

(Signed) Bud.

Dear Sam,

I have your letter of May 13 regarding repulping the MCR CB Broke. Several different mills have used limited quantities of our CB Broke over the years, including Bergstrom Paper Company, Neenah, Wisconsin and Allied Paper Company, Kalamazoo, Michigan. At present we believe that the Kimberly-Clark Company, Moraine Mill in West Carrollton, Ohio is using the bulk of the CB Broke, and is repulping it very successfully. All of our waste papers are sold through dealers, and, therefore, it is possible that someone else would be getting some of this that we would not be aware of.

We actually know very little about the processes used in reclaiming the CB Broke, however, we do not know that it is done by a conventional de-inking process. The Moraine Mill has a batch process and we believe they have developed some special handling means which enable them to easily remove the CB coating. Confidentially, we can tell you that we receive \$ 75.00 per ton for this waste, which is quite high in relation to other waste papers we sell. This compares favourably with other white waste papers we sell and, therefore, they must be removing the coating in a rather simple manner.

It was certainly nice to hear from you, Sam. If we can be of help on anything else, please let us know.

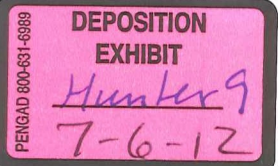

Yours very truly,

Dear Sir,

NCR BROKE - REPULPING

I have your letter of May 13 regarding repulping the NCR CB Broke. Several different mills have used limited quantities of our CB Broke over the years, including Bergstrom Paper Company, Woonah, Wisconsin and White Paper Company, Marquette, Michigan. In process to be sold that the Kimberly-Clark Company, Marquette Mill in West Carroll, Ohio is using the bulk of the CB Broke, and is repulping it very successfully. All of our waste papers are sold through dealers, and, therefore, it is possible that someone else would be getting some of this waste - and not be aware of.

We actually know very little about the processes used in repulping the CB Broke, however, we do not know that it is done by a conventional re-fining process. The Marquette Mill has a batch process and we believe they have developed some special handling means which enable them to easily remove the CB coating. Confidentially, we can tell you that we receive \$ 75.00 per ton for this waste, which is quite high in relation to other waste papers we sell. This compares favourably with other white waste papers we sell and, therefore, they must be removing the coating in a rather simple manner.

It was certainly nice to hear from you, Sir. If we can be of help on anything else, please let us know.

Yours very truly,
